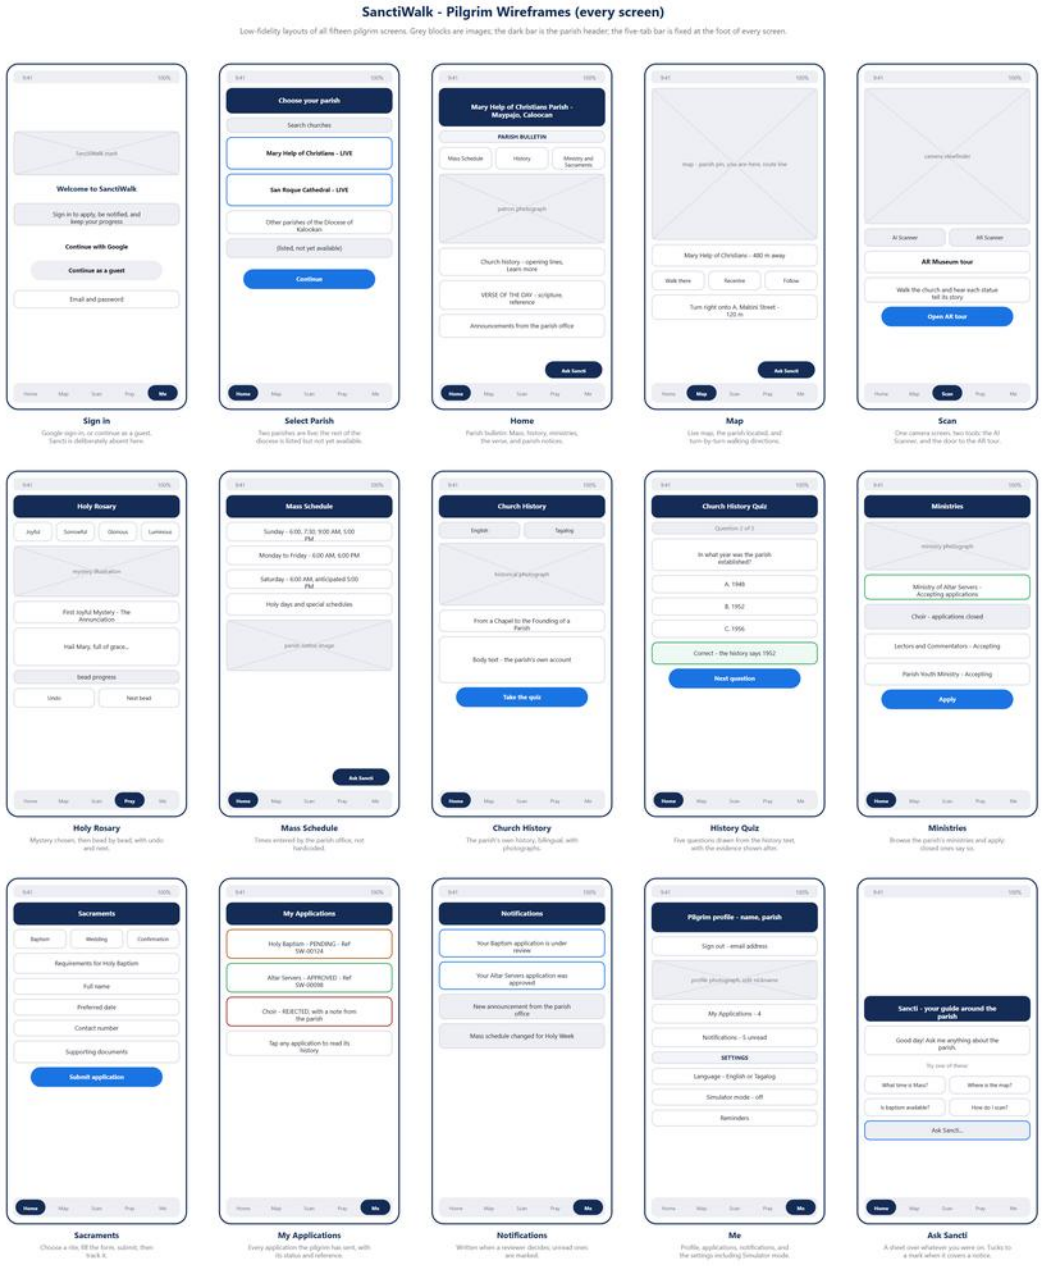

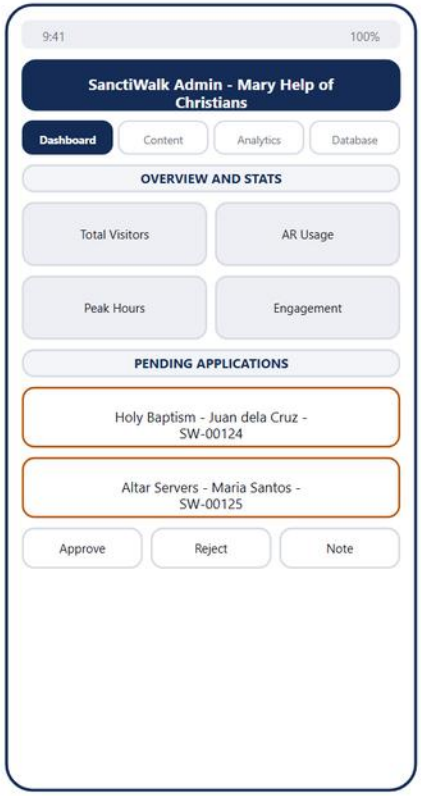

Figure 9 — Wireframes: Pilgrim Screens

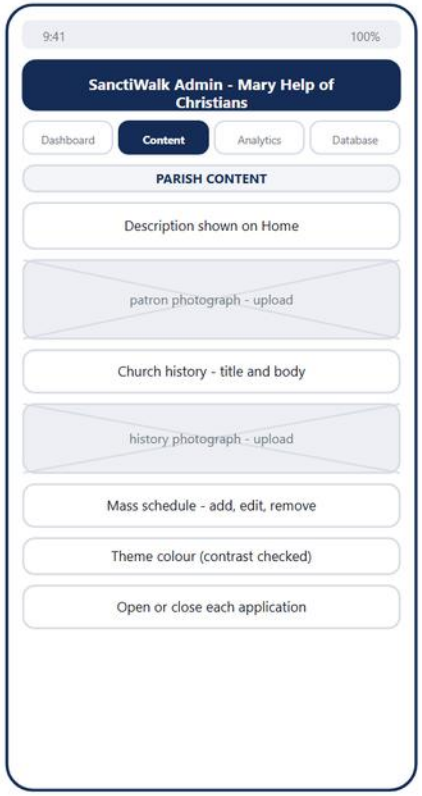

SanctiWalk - Admin Panel Wireframes

Four sections, each scoped to one parish. Security rules enforce that scope on the server, so the portal cannot be made to show another parish's data.

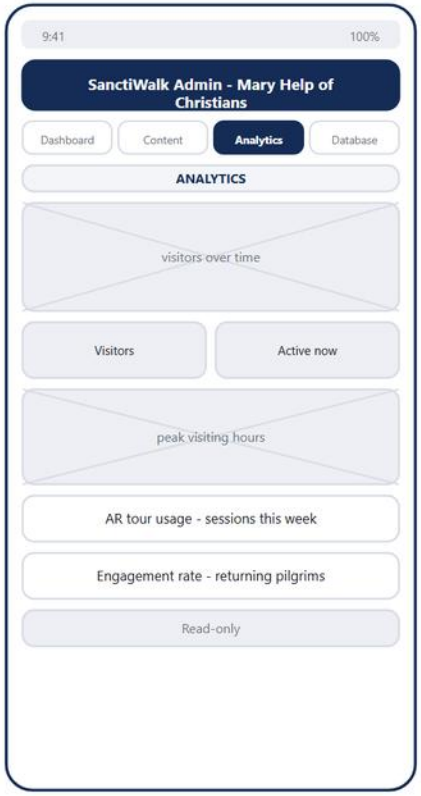

Admin - Dashboard

Pending applications first, because that is the parish's actual daily work.

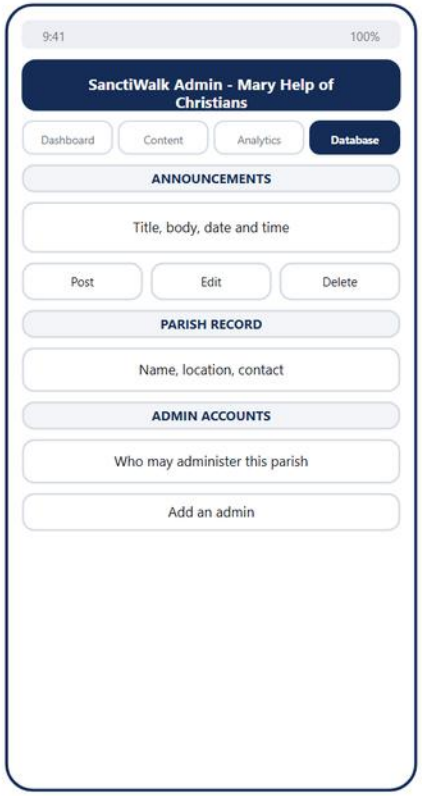

Admin - Content

Everything a parish must be able to change without a developer.

Admin - Analytics

How the parish is actually used: visitors, AR sessions, peak hours.

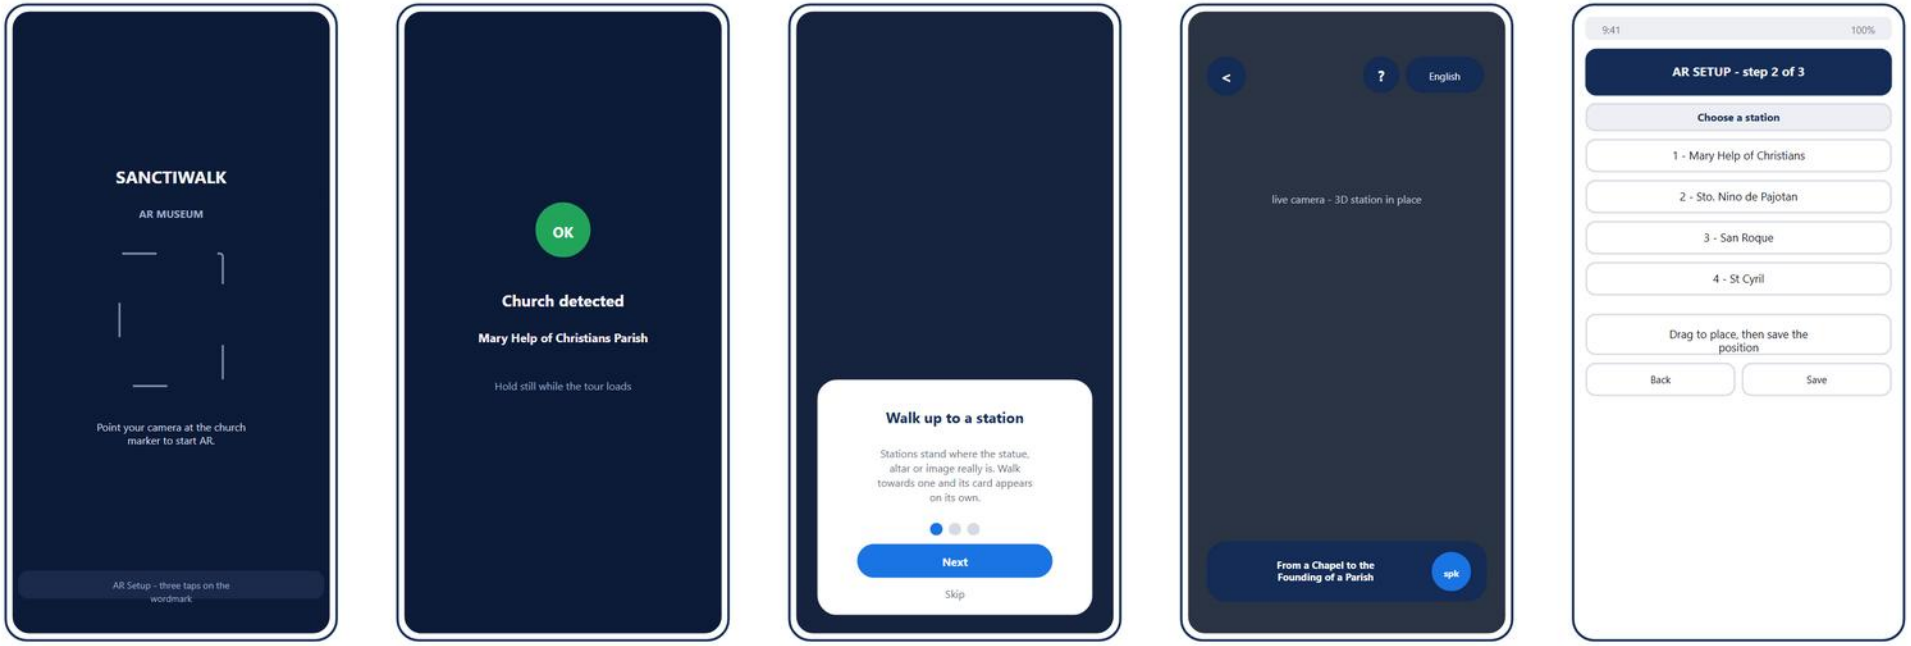

Admin - Database

Announcements, the parish record, and who may administer it.

Figure 10 — Wireframes: Admin Panel

SanctiWalk AR - Unity Application Wireframes

The separate ARCore application SanctiWalk hands over to. Dark screens are the live camera; the operator's setup flow is hidden behind a gesture.

AR - Entry
Wordmark, viewfinder, instruction. No button: the marker is read continuously.

AR - Detected
Hold still while the origin resolves; it advances by itself.

AR - Tutorial
Three cards over the live camera, shown once; the ? button replays it.

AR - Tour running
Camera, the station's name, and a speaker. Lit means it is talking.

AR - Setup (operator)
Reached by three taps on the wordmark, and only on the parish's own setup phone.
